## Objective:

Passionate and highly motivated fresher React Web Developer with a strong foundation in front-end and back-end development. Eager to contribute to dynamic projects and leverage skills in JavaScript, React, MERN stack, and Node.js to create exceptional web experiences.

## EDUCATION

### Bachelor of Engineering in Civil Engineering

NRI institution of Technology, Vijayawada - APR - 2022

### Full Stack web Development

Relevel by Unacademy - AUG - 2023

## SKILLS

### Languages:

- JavaScript
- HTML5
- CSS3,

### Front-End:

- React
- Redux
- Bootstrap
- Tailwind

### Back-End:

- Node.js
- Express.js
- MongoDB
- MySQL

### Tools:

- Git
- VS Code
- Render
- Netlify

### Communication:

- Excellent written
- verbal communication skills

## PROJECTS

### Ecommerce (MERN Project): [Live](#) [Frontend code](#) [Backend code](#)

- Created a full-fledged e-commerce platform using the MERN stack (MongoDB, Express.js, React, Node.js), Tailwind css, react-icons and react-toastify for notification.
- Implemented user authentication, product listing, shopping cart functionality, and secure integration, user interfaces and features for users and administrators, such as product search, shopping cart management, and robust user authentication.
- Utilized Redux for state management and designed responsive UI for optimal user experience.

### Nuakri Clone (MERN Project): [Frontend code](#) [Backend code](#)

- Developed a job portal web application similar to Naukri using the MERN stack.
- Implemented features like user registration, job posting, search functionality, and application tracking.
- Designed and optimized the database schema for efficient querying and data storage.

### Al Quran Web app: [GitHub](#) [Live](#)

- Created a web application that allows users to read and search the Quran online.
- Integrated an API to fetch Quranic verses, translations, and commentary.
- Implemented user-friendly navigation and a responsive design to ensure accessibility on various devices.

### MaNa CaseMaster: [GitHub](#) [Live](#)

- Built a text conversion tool using React to assist in converting text between different cases (e.g., camelCase, snake\_case).
- Designed an intuitive user interface that enables users to input text and select the desired case format.
- Implemented the conversion logic using JavaScript functions.

### Notification Service: [GitHub](#)

- Developed a notification service using Node.js, Express.js, and MongoDB to send automated emails.
- Integrated Nodemailer to handle email notifications for various events.
- Designed a RESTful API for triggering and managing notifications.

### Achievements:

- Full Stack Web Development from Relevel by Unacademy
- Expected Completion: August 2023

### Activities:

- Participating in coding on leadcode.
- Learning New technologies
